

U | QUARTZ

Care & Maintenance

Routine Cleaning: uQuartz surfaces do not require sealers or special cleaning solutions. Simply clean your uQuartz surface with warm water and a mild detergent applied by a soft rag. Avoid using chemical cleaners which include bleach or oxidizers, and avoid cleaning your uQuartz surface with abrasive sponges. Always dry the surface after cleaning.

Tough Stains: Although uQuartz surfaces are non-porous and do not allow stains to penetrate the exterior- certain agents like dyes, markers, and other chemicals can permanently discolor the quartz surface. If your surface comes into contact with one of these agents or you encounter a stubborn stain, always clean these areas as soon as you notice them. For heavy duty spot cleaning, try the following method:

1. **Apply** *OxiClean™ Laundry Stain Remover Spray* (Do not use the OxiClean powder form).
2. **Let the spray sit and soak into the stain for 4-5 minutes, then wipe it off using a small amount of water.**
3. **Repeat step two, 4-5 times until stain is removed. Use pressure but do not rub the area TOO hard when wiping off the spray.**
4. **Once the stain is no longer visible, use a standard 'Stone countertop cleaner' to help re-polish the surface. This will ensure that there is no loss of shine or polish in the area where you applied the spray.**

Things to Avoid:

- Avoid placing hot pans/skillets/crock pots directly on uQuartz surfaces
- Do not expose uQuartz surfaces to chemicals which include: bleach/high pH/acids/oxidizers
- Do not expose uQuartz to: paint removers, pipe cleaners, oil soaps, dishwasher detergents
- Do not use wire brushes, harsh sponges, or abrasive scrub pads on uQuartz surfaces
- Avoid using sharp utensils directly on uQuartz surfaces, cutting board is recommended
